

SUMMARY

Python backend engineer with about three years at Cisco building reliable, well-tested REST APIs and data-processing services end to end. Works in the same stack this role runs on, from FastAPI and Django REST Framework through Pandas, NumPy, Polars, and PySpark, with a track record of quality (85% unit coverage, 30% fewer escaped defects) and performance (15-25% memory reduction on high-traffic paths). Ready to bring that reliability-first rigor to the backend and workflow systems behind supply chain operations that move products from factory to customer.

PROFESSIONAL EXPERIENCE

Software Engineer II

September 2025 - Present

Cisco Systems | San Jose, CA

- Built Python data validation and normalization routines using Pandas, NumPy, and Polars, and applied PySpark to process larger datasets in a distributed pipeline.
- Designed and maintained backend REST APIs in Python with FastAPI and Django REST Framework, engineering idempotent operations with clear failure modes and defensive error handling to reduce operational toil.
- Reduced memory usage 15-25% on high-traffic backend endpoints by profiling and optimizing critical service paths.
- Owned end-to-end delivery of internal applications spanning backend services and UI, iterating on direct user feedback to shorten time-to-debug and speed up the workflows operators run daily.
- Leveraged Codex and agentic AI workflows to accelerate development, automate repetitive tasks, and support complex engineering work.

Software Engineer I

August 2023 - September 2025

Cisco Systems | San Francisco / Remote

- Cut workflow execution time 35-55% across teams by building Python internal tooling and automation services with standardized execution behind FastAPI REST endpoints.
- Raised first-pass success to 92% by developing a web-based automation client integrated with controller REST APIs (Cisco NDFC). Real-time validation gave operators fast and safe iteration.
- Prevented 1-3 high-risk misconfigurations per month by adding workflow-engine reliability features: structured logging, run summaries, and dry-run validation modes, each with consistent error reporting.
- Standardized customer-migration workflows by building reusable Terraform configurations alongside Ansible playbooks that automated environment setup and improved repeatability across engagements.

Software Developer Intern

May 2023 - August 2023

Cisco Systems | Research Triangle Park, NC

- Reduced manual delivery and migration effort 40-60% and improved migration speed 20-35% by building a Python automation tool backed by REST APIs.
- Reduced rework from configuration drift 20-30% by introducing parameterized templates and repeatable playbooks.

Full Stack Software Engineer Intern

May 2022 - August 2022

S&C Electric Company | Alameda, CA

- Raised lab and device availability to 92% uptime from 86-87% using Python and PowerShell automation, increasing test throughput while reducing developer interruptions.

EDUCATION

- Gonzaga University — Bachelor's in Computer Science, Minor: Management Info Systems • May 2024
- Cisco Certified DevNet Associate — Jul 2023 ([Link](#))

SKILLS

Python • FastAPI • Django REST Framework • REST APIs • Pandas • NumPy • Polars • PySpark • Distributed Systems • SQL • Unit & Integration Testing • Performance Profiling • Error Handling • Docker • Kubernetes • AWS • CI/CD • Terraform (IaC) • Ansible • gRPC • Java • C++ • JavaScript • TypeScript • React • SCSS • HTML • XML • Linux/Unix
